

Liam Le Strat

Front-End Developer · React / TypeScript · Accessibility and performance

📞 (+33) 07 82 85 35 74 ✉ lestratliam@gmail.com 🌐 liam-le-strat 🏠 liamls 📍 Paris

Front-end developer with six years of experience building React and TypeScript applications used by millions of people: checkout flows, single sign-on and high-volume data visualisation. I work closely with product, design and business teams to shape what we build and see it through to production, and I like passing on what I learn along the way. English has been part of every project I have worked on, in code and open source as much as in day-to-day conversations with teams and contributors in several countries.

PROFESSIONAL EXPERIENCE

Front-End Developer

France Université Numérique, the French national online-learning platform · Permanent · Paris · June 2025 – Present

- **Checkout flow:** shipped the major changes in React and Next.js (discount codes, bulk corporate purchases, payments through the French state training-credit scheme), working with product, design and back-end teams from scoping user needs through to release, defining the API contracts and owning the business logic.
- **Open source TypeScript applications:** maintain and extend two React and Next codebases that run in production at France Université Numérique and are reused by other training providers, build reusable component libraries, write the technical documentation, review external contributions and make the technical calls on them, and set up vulnerability scanning in the CI pipeline. Repos: [Richie](#), [Joanie](#).
- **Keycloak SSO authentication:** designed and built the sign-in journey with the legal and communications teams, balancing regulatory requirements, brand guidelines and a single identity, on an authentication flow built to scale to 2 million users.
- **Code review, pair programming and mentoring:** trained 4 external contributors in front-end best practices (React and Next.js), with a demo environment built for the workshops.
- **Digital accessibility:** brought interfaces up to WCAG standards and ran workshops as part of a national digital-inclusion programme, sharing best practices across the organisation.

Full Stack Developer

INSEE, the French national statistics institute · Contract · Montrouge · November 2023 – May 2025

- **Melodi project (Open Data):** React application backed by Java and Spring micro-services; tuned front-end rendering and loading performance on large datasets, built a proof of concept to improve search visibility (SEO) and ran an accessibility pre-audit.
- **Salary data visualisation:** application owner for the institute's third most visited tool, setting the roadmap, weighing up priorities, fixing vulnerabilities and automating the delivery pipeline.
- **Institutional cooperation:** technical discussions and joint projects with the French open data platform team and the Bulgarian statistical institute.

Software Engineer

Orange Business Services · Apprenticeship · Rennes · September 2020 – September 2023

- **Internal application rebuild:** designed and built the front end in JavaScript (Vue and Nuxt) along with the Java (Spring) services, and delivered a demo portal as my final-year project.
- **Malima international project (IoT, SIM cards):** worked in English with international teams every day and facilitated the agile ceremonies.
- **Industrialisation and observability:** migrated Jenkins pipelines and set up application monitoring and Grafana dashboards.

SKILLS

Front-end: TypeScript, JavaScript (ES6+), React (hooks, context, router), Next.js, HTML5, CSS3, Tailwind, state management and client-side caching (TanStack Query), testing (Jest, Vitest, Testing Library, Playwright), design systems (Cunningham, the French government design system, Storybook), accessibility (WCAG, ARIA), web performance and Core Web Vitals, SEO, build tools (Vite, Webpack).

Back-end: REST APIs, API contracts, micro-services, Node.js, Python (Django), Java (Spring), databases (SQL).

Tooling: Git, CI/CD (CircleCI, GitLab CI, GitHub Actions), Docker, monitoring and observability (Grafana).

Ways of working: agile, TDD on complex features, code review and pair programming, AI-assisted development (BMAD method).

EDUCATION

MEng in Computer Science and Telecommunications (apprenticeship)
IMT Nord Europe | 2020 – 2023, Lille, France

Two-year technical diploma in Networks and Telecommunications (apprenticeship)
Saint-Malo Institute of Technology | 2018 – 2020

Baccalauréat (French secondary school diploma), science stream, with honours
Lycée Émile Zola | 2015 – 2018, Rennes

LANGUAGES

French: native speaker
English: B2 (TOEIC 890)
Mandarin: A2 (HSK 2)

PROJECTS

3D on the web with Three.js Journey, fourth place in a community competition: [liam-house-threejs.vercel.app](#)

Websites for self-employed clients: gathered the requirements, designed, built and delivered each site, including [mikhaprod.com](#) for a videographer.

Web application security, offensive side: Pentest Level 1 path on TryHackMe (in progress).
